BRUCELLOSIS--MEDICAL TREATMENT

334. Griggs, Joseph Franklin.

Chronic brucellosis; conclusions on treatment after ten years. J. Am. Med. Assn. Apr. 3, 1948. 136:14:911-915.

"The difficulties in treating chronic brucellosis are examined. Ten years' experience in the treatment of 300 patients by various schemes of specific vaccine is reviewed. The usual methods of using brucella vaccine have been rather disappointing. Nevertheless, vaccine administered by an improved method appears to offer better results than any other management...A safe and effective method of treating chronic brucellosis with oxidized brucella vaccine has been developed and is reported in this paper."

EPILEPSY--STATISTICS--GREAT BRITAIN

364. Henderson, Peter

Incidence of epilepsy in children of school age. Lancet. Mar. 20, 1948.
254:6499:455-457.

A report of a survey made as to the proportion of school children who are epileptic and need special schools for their care and education. "A school population of about 1,700,000 children--about a third of the total school population of England and Wales--yielded 519 educable epileptic children (0.3 per 1000 school-children) who were considered to be in need of education in special schools for epileptics." Survey reveals that there are "only 7 special boarding-schools, with accommodation for 660 epileptic children (0.12 places per 1000 school-children), in England (none in Wales) at present. If the information obtained from this inquiry is representative of the country as whole--a reasonable assumption--there is need for 800-1000 additional special-school places for epileptic children. And the most pressing need is for the provision of special schools for epileptic children who are also educationally sub-normal."

Cerebral complications in pertussis, by Abraham M. Litvak, Harry Gibel, Seymour E. Rosenthal, and Philip Rosenblatt. J. of Pediatrics. Apr., 1948. 32:4:357-379.

"The purpose of this paper is to present an analysis of forty-seven cases of clinical cerebral complications which occurred in 6,002 patients with pertussis admitted to the Kingston Avenue Hospital for Communicable Diseases (Brooklyn, N.Y.) from 1932 to 1946 inclusive... Fifty percent of the patients were under one year of age, and 60 per cent were under 2 years of age... The

prognosis in patients with cerebral complications in whooping cough depends upon the age of the patient, the severity of the paroxysm, the nutritional state of the patient, the length of the convulsive seizure, the duration of the coma, and upon the presence of an associated complication. In round figures, one-third of the patients with cerebral complications die, one-third recover to develop sequelae, one-third recover completely."

CHANGE IN SUBSCRIPTION RATE

The subscription rate of the BULLETIN ON CURRENT LITERATURE has been raised to \$1.00 a year. This increase in price has been made so that the subscription will more nearly pay the actual cost of paper, printing and mailing than previously.

Annual subscriptions received after July 1, 1948, will be \$1.00. Those now in effect under the former rate will be continued for the full subscription period.
